PROFESSIONAL SUMMARY

IT support professional with a B.S. in Electrical & Computer Engineering and a Google Cybersecurity Professional Certificate, currently ranked #1 of 21 associates at Micro Center's contact center, handling 200+ calls and chat tickets per week across hardware, software, and network configuration issues. Proven track record of top-tier performance, including leading the team in Priority Care+ membership sales this quarter (37 conversions at $150 each). Strong engineering fundamentals, a systematic troubleshooting methodology, and hands-on experience diagnosing complex electronic and networked systems. Seeking to transition into an enterprise or internal IT support role — helpdesk, desktop support, or IT operations — where technical depth and a high-volume support track record can drive faster resolution and stronger internal service quality.

KEY QUALIFICATIONS

- #1 ranked associate (of 21) in Micro Center's contact center performance-based schedule priority system, reflecting top resolution quality, productivity, and consistency.
- Handles 200+ calls per week plus chat support, diagnosing and resolving hardware, software, and network configuration issues across a wide range of consumer technology.
- Led the team this quarter in Priority Care+ membership sales (37 sales at $150 each), demonstrating strong rapport-building and ability to communicate technical value clearly.
- B.S. in Electrical & Computer Engineering providing deep fundamentals in digital systems, embedded systems, and network protocols — well above the technical baseline for typical helpdesk roles.
- Systematic troubleshooting methodology: gather symptoms, reproduce issue, isolate root cause, test solution, document findings — directly applicable to incident and service request workflows.
- Experience supporting a federal benefits program (BeneFeds) — comfortable with regulated, process-driven support environments.

TECHNICAL SKILLS

Support & Operations: Windows 10/11 troubleshooting, Microsoft Office Suite, ticketing/documentation systems, multi-channel support (phone, chat, email), TCP/IP and basic networking concepts

Onboarding / Account Support: User account and access troubleshooting; quick to learn Active Directory and Microsoft 365 user/permissions management for onboarding and offboarding workflows

Remote Support & Endpoint Tools: Comfortable adopting remote access tools (RDP, TeamViewer) and endpoint management platforms (Intune, SCCM) to support workstation configuration and device management

Diagnostics & Hardware: Component-level troubleshooting and repair, root cause analysis, hardware diagnostics, electrical systems, circuit analysis, professional diagnostic software

Security: Google Cybersecurity Professional Certificate (access controls, incident response basics, NIST framework); CompTIA Security+ (in progress)

PROFESSIONAL EXPERIENCE

Tech Support Specialist (Contact Center) *December 2025 – Present*
Micro Center Hilliard, OH

- Currently ranked #1 of 21 associates in the contact center's performance-based schedule priority ranking, reflecting consistent top-tier call quality, resolution rates, and productivity.
- Handle 200+ inbound calls per week plus live chat support, diagnosing and resolving hardware, software, and network configuration issues across a wide range of consumer technology.
- Led the team in Priority Care+ membership sales this quarter with 37 conversions at $150 each.
- Document all interactions in a ticketing system with clear, repeatable resolution steps to support knowledge sharing across the team.

- Maintain professional, patient communication while managing high call volume and varying technical skill levels among customers.

Customer Service Representative *November 2025*
Working Solutions (BeneFeds Federal Benefits Program) – Remote

- Provided technical and account support for a federal employee benefits program via phone and chat.
- Troubleshot system access issues and guided users through enrollment and account resolution processes.
- Documented support interactions in a ticketing system with clear resolution steps.

TECHNICAL PROJECTS

- Embedded Systems: Configured and deployed Arduino and Raspberry Pi platforms for personal automation projects, including building 3D printers from scratch with OctoPi print server setup and remote monitoring.
- Automotive Diagnostics: Diagnosed and resolved complex multi-module communication faults using professional diagnostic software (BMW INPA, ISTA), including CAN bus network analysis and ECU configuration.
- Component-Level Repair: Performed circuit board diagnostics and component-level soldering repairs (e.g., MOSFET replacement), developing hands-on familiarity with hardware failure modes and fix validation.
- Custom Electronics: Hand-soldered custom circuit boards including functional radios and consumer electronics; built and programmed custom quadcopter drones including hardware-software tuning for stability.

EDUCATION & CERTIFICATIONS

B.S., Electrical & Computer Engineering *2019*
The Ohio State University Columbus, OH

Relevant coursework: digital systems, embedded systems, network protocols, data structures. Senior capstone project: autonomous robot with sensor integration and communication networks.

Google Cybersecurity Professional Certificate *2025*
Google / Coursera

Comprehensive training in security fundamentals, network security, incident response, and security frameworks (NIST).

CompTIA Security+ *In Progress*
Self-Study
